

CLOTHING SYSTEMS

INTRODUCTION

SYSTEM INTEGRATION

What is the complete system?

All our products are designed to work together in a system.

The underwear is designed to work with the clothing on top. It is of course also comfortable, sweat transporting and other features that is the purpose of underwear.

The clothing is designed to work with the underwear and the carrying equipment or ballistic protection carried on top of the clothing. It is also easy to move in, has pockets and protection in the right places and gives protection against wear, wind, water or the sun.

The carrying equipment and ballistic protection is designed to work with the clothing and backpacks to minimize strain and to be as comfortable as possible.

The mission backpacks are designed to attach to the carrying equipment and ballistic protection to maximize the comfort when carrying it. Large backpacks are designed to be carried outside body armour or equipment vests.

As we design, produce and distribute all products in the system we can guarantee that they work together.

LIGHT UNDERWEAR

The first layer job is to keep you dry and comfortable.
The material is flame retardant (FR), melt-proof, no drip protection for protection against fires or extreme high temperatures.

The innermost, light weight layer is composed of briefs, T-shirt, long sleeve crew neck shirt and long leg pants.
